

Create accessible PDFs with Adobe InDesign CC and axaio MadeToTag

This sequence of screen recordings explains and demonstrates how to create accessible PDF using Adobe InDesign CC and axaio MadeToTag. The focus of the 7 steps of this tutorial is on the following five core principles:

- semantic role
- reading order
- alternative text for images and graphics
- contrast
- metadata

Obviously a recording of a two hour introductory session does not cover all details that are relevant when the goal is a 100% accessible and fully PDF/UA conforming PDF document. Nevertheless, for a surprisingly huge portion of documents following the five core principles listed above will result in almost perfectly accessible PDF documents.
